

UNIVERSITY OF KELANIYA – SRI LANKA

FACULTY OF COMPUTING AND TECHNOLOGY

Bachelor of Information and Communication Technology Honours Degree

Computer Technology

SWST 32012 – System Analysis and Design

Assessment Guidelines: Software Requirements Specification (SRS)

- **Team Structure:** Groups must consist of a maximum of **four members**.
- **Project Selection & Scope:** Select a real-world system. *Crucially, if selecting a large enterprise system (e.g., an LMS or Medical Inventory System), you must clearly define and restrict your scope to a manageable sub-system.*
- **Professionalism & Formatting:** This is a professional technical document; clarity and precision are prioritized over visual design.
 - Use the provided “SRS Cover Page.docx”. Replace the blue text with your project details. Do not alter the black text. The final cover page must be entirely in black text.
 - **Typography:** Times New Roman, 12 pts for body text, 1.5-line spacing. Use the default heading sizes provided in the “SRS Template.docx”.
 - **Pagination:** All pages (excluding the cover) must be numbered in the lower right-hand corner.
 - **Figures & Tables:** Every image, diagram, and table must be numbered, captioned, and explicitly referenced in the main body text.
- **Length:** The document must not exceed 50 pages (excluding appendices).
- **Grading Constraints:** Strict adherence to these templates, formatting rules, and standard conventions is mandatory. Failure to follow these will result in mark deductions.
- **Requirement Gathering (Bonus Credit):** Demonstrating the use of real-world requirement-gathering techniques (e.g., interviews, surveys) will earn additional marks. To qualify, you must attach the raw instruments (e.g., blank questionnaires) to the appendix AND demonstrate within the SRS how the collected data directly influenced your functional requirements.
